Estrogens and Progestogens in Clinical Practice
The Ovary, Third Edition, includes more than 60% new material that highlights the clinical aspects of human ovarian functions. It covers advances in the areas of genomics, assisted reproductive technology, and cancer diagnosis and treatment. This updated edition synthesizes new information at the molecular, cellular and organismal levels, while also presenting modern ovarian physiology in a more understandable and comparative context. The book looks at ovarian function from a detailed molecular and cellular level that examines all phases of the ovarian lifecycle that places special emphasis on the pathophysiology of the human ovary, including ovarian carcinogenesis. Represents an unparalleled compilation of chapters that are relevant to contemporary ovarian physiology. Provides basic and clinical research on ovarian function, abnormalities, assisted reproductive technology, and cancer. Highlights contemporary strategies and treatment paradigms in female factor infertility.

Clinical Gynecologic Endocrinology and Infertility
Focusing on the aetiology, morphology and epidemiology of lesions that interfere with the normal human reproductive process, this book covers the
pathologic basis of infertility - malformations, diseases of the embryo, abnormalities of implantation and the support system of the developing embryo.

Women's Primary Health Care A comprehensive and practice-oriented resource guide to currently available diagnostic and treatment options for male infertility disorders. Topics covered range from basic sperm biology and male reproductive endocrinology, to immunology, specialized sperm testing, and the genetic background to male infertility. The authors emphasize the investigation, diagnostic testing, and management of the infertile male, but also examine such timely issues as gender selection, HIV discordance couples, and posthumous reproduction. Other topics of interest include laboratory accreditation, vasectomy reversal, ethical and legal considerations of donor insemination, optimizing success in a donor insemination program, and strategic therapies for ejaculatory disorders and erectile dysfunction in infertile men.

Clinical Gynecologic Endocrinology & Infertility Now in a completely revised and expanded third edition, including six new chapters, this user-friendly textbook offers a succinct overview of both the medical and surgical management of reproductive disorders, as well as coverage of associated imaging modalities. Included here are updated chapters on major reproductive endocrinology and infertility issues, such as polycystic ovary syndrome (PCOS), pubertal disorders, amenorrhea, menopause, management of endometriosis and fibroids (including interventional radiology), laboratory and clinical aspects of assisted reproductive technologies (ART), imaging modalities such as ultrasonography and sonohysterography, and hysteroscopic and laparoscopic techniques. New chapters include an expansion of female infertility and fertility, preimplantation diagnosis and screening, osteoporosis, and contraception and sterilization. In addition, each chapter opens with a clinical case presentation and a list of keywords relevant to the topic at hand. Residents, fellows, and new clinicians of obstetrics and gynecology interested in reproductive endocrinology and infertility will find Clinical Reproductive Medicine and Surgery: A Practical Guide a valuable and focused reference.

Reproductive Endocrinology and Infertility This unique text discusses the wide range of causes and pathophysiologic conditions contributing to recurrent implantation failure (RIF) and the current treatment approaches to best approach this challenging patient population. Beginning with a presentation of the mechanism of normal implantation, the physiologic synchrony between embryo and endometrium, and the roles of both gametes and embryos in RIF, the book then examines the various genetic, immune and environmental factors involved. Abnormalities of the hematologic and endocrine system, as well as those of the anatomy and microbiome, are described in detail. Last but no less important, the psychological stress and
treatment of patients experiencing RIF is discussed. Assisted reproductive technology (ART) success has increased substantially over the past three decades. However, despite these advances, recurrent implantation failure is still a common issue confronting patients and clinicians, and RIF represents one of the greatest challenges in ART and remains a source of frustration and disappointment for patients, clinicians, and researchers involved in the process. Providing an in-depth investigation into the pathophysiology and biological mechanisms of RIF and its clinical management, this will be an excellent resource for reproductive endocrinologists and infertility specialists.

Gynecologic Health Care: With an Introduction to Prenatal and Postpartum Care Women and Health is a comprehensive reference that addresses health issues affecting women of all ages – from adolescence through maturity. It goes far beyond other books on this topic, which concentrate only on reproductive health, and has a truly international perspective. It covers key issues ranging from osteoporosis to breast cancer and other cancers, domestic violence, sexually transmitted diseases, occupational hazards, eating disorders, heart disease and other chronic illnesses, substance abuse, and societal and behavioral influences on health. In this second edition of Women and Health, chapters thoughtfully explore the current state of women’s health and health care, including the influences of sex and gender on the occurrence of a wide variety of diseases and conditions. All chapters have been extensively updated and emphasize the epidemiology of the condition – the etiology, occurrence, primary and secondary prevention (screening), risk factors, surveillance, changing trends over time, and critical analysis of the diagnostic and treatment options and controversies. Treatment sections in each chapter have been expanded to create a stronger dialogue between epidemiologists and women's health practitioners. Saves researchers and clinicians time in quickly accessing the very latest details on a broad range of women’s health issues, as opposed to searching through thousands of journal articles Provides a common language for epidemiologists, public health practitioners, and women’s health specialists to discuss the behavioral, cultural, and biological determinants of women’s health Researchers and medical specialists will learn how the gender-
specific risks and features of one organ system’s diseases affect the health of other organ systems. For example: Hormone replacement therapy used to treat imbalance within the endocrine system is also being used to prevent and treat cardiovascular disease; Drugs developed for type 2 diabetes are now being used in chemoprevention.

Orients the non-gerontologist about the importance of considering the entire life cycle of women within research designs and treatment plans. Professors teaching courses in women’s health will use slides and additional materials to structure lectures/courses; students will use slides as a unique resource to study for exams.
