Facts About MySQL Database. MySQL is the de-facto standard database system for web sites with HUGE volumes of both data and end-users (like Facebook, Twitter, and Wikipedia). Another great thing about MySQL is that it can be scaled down to support embedded database applications.

Oracle Database Editions. Oracle database is available in five editions, each edition is suitable for different development and deployment scenarios. There are also several database options, packs, and other products that enhance the capabilities of Oracle database for specific purposes. Here is the list of Oracle database editions:

Oracle Database Ajax Php Web Application Development 1st Edition
PHP is an open-source general-purpose scripting language, which is widely used for creating dynamic and interactive web pages. PHP can access a large range of relational database management systems such as MySQL, SQLite, and PostgreSQL. The PHP 5.1 version offered a new database connection abstraction library, which is PHP Data Objects (PDO).

Oracle Application Express (abbreviated APEX, previously named Oracle HTML DB) is a web-based software development environment that runs on an Oracle database. It is fully supported and comes standard (free, at no additional cost) with all Oracle Database editions and Oracle Autonomous Database Service.

In this tutorial, we are going to Build Ajax Search Box using PHP as core language. Ajax Search booms the usage of web projects such as one Google uses. Searching through Ajax and also maintaining less load on Server is a big challenge.
