The first textbook devoted to this emerging area, Health Systems Science now brings you fully up to date with today's key issues and solutions. This increasingly important branch of health care explores how health care is delivered, how health care professionals work together to deliver that care, and how the health system can improve patient care and health care delivery. Along with basic and clinical sciences, health systems science is rapidly becoming a crucial 'third pillar' of medical science, with an emphasis on understanding the role of human factors, systems engineering, leadership, and patient improvement strategies that will help transform the future of health care and ensure greater patient safety. In this 2nd Edition, new chapters, new exercises, and new information help you acquire the knowledge and skills you need for success in today's challenging healthcare system. The first comprehensive text for mastering health systems science, offering practical coverage of all of the factors in the lives of patients that influence their well-being, the structures and processes of the health system itself, societal factors, communication, and information technology. NEW to this edition: New content on systems thinking and ethics and legal issues further define and address this new important component of health care education; additional exercises; and expanded information on the patient experience and private practice. Complete coverage of patient safety, quality improvement, value in health care, teamwork, stewardship of health care resources, population health, clinical informatics, care coordination, leadership, and health care financing/reform. Patient improvement strategies incorporate checklists, information technology, team training, and more. A consistent chapter template provides clear coverage of each topic, including Learning Objectives, Chapter Outline, Core Chapter Content, Summary, Questions for Reflection, and Annotated Bibliography and References. Developed by the American Medical Association’s Accelerating Change in Medical Education Consortium, and authored by a team that includes AMA staff members working with individuals from the Consortium member schools. StudentConsultT eBook version included with purchase. This enhanced eBook experience allows you to search all of the text, figures, and references from the book on a variety of devices.

A Doll’s House

Transformative Learning in Healthcare and Helping Professions Education: Building Resilient Professional Identities is a co-edited book (Carter, Boden, and Peno) with invited chapters from educators who share our passion for learning in healthcare and the helping professions. The purpose of the book is to introduce professional learners (students, residents, and others in professional training) to transformative learning for building resilient professional identities amid practice environments that include widespread burnout and compassion fatigue. With a diverse set of authors engaged in clinical and educational practice in academic medicine, nursing, dentistry, physical therapy, mental health counseling, science education, psychology, social work, and inter-professional collaborative practice, we offer strategies for building resilience throughout the years of professional training and into professional practice. We do so through the experiences of authors involved in healthcare and the helping professions to illustrate how some are coping with the challenges of burnout and compassion fatigue through learning that can be transformative. This book explores the nature of professional identity formation by examining ways that professionals in
training can thrive amid the challenges of today's stressful practice environments. First-hand stories of resilience illustrate how learners, as well as educators in these professions, are addressing adversity, career decision-making, service to the underserved, and the self-care needed to provide excellent care for others. The prominence of transformative learning within adult learning theory is illustrated for its potential to revise the meaning that learners make of their experiences and open up new possibilities for renewed vitality in professional education and practice environments. The book has two primary audiences: professional learners in healthcare and helping professions education, and their educators who are often professional practitioners themselves. These educators have a significant role in influencing the next generation of professionals by serving as mentors, role models, and teachers. The importance of fostering learning that is transformative has never been more important than it is today for those who will work in these demanding professions. We invite readers to discover experiences and strategies for achieving individual wellbeing, as well as opportunities for building a culture within professional education and practice settings that will foster resilience.

MRCP Part 2 Self-Assessment

The most efficient, readable, and reasonable option for preparing for the Texas Medical Jurisprudence Examination, a required test for physician licensure in Texas. The goal of this study guide is to hit the sweet spot between concise and terse, between reasonably inclusive and needlessly thorough. This short book is intended to be something that you can read over a few times for a few hours before your test and easily pass for a reasonable price, with enough context to make it informative and professionally meaningful without being a $200 video course or a 300-page legal treatise. After all, the Texas JP exam isn’t Step 1—it’s a $58 pass/fail test!
