Wings for Our Courage

A 2018 TEXAS LONE STAR READING LIST PICK! “A rare jewel. A new classic in the fantasy genre.” —Eoin Colfer, author of the bestselling Artemis Fowl series Henry H. Neff’s new high-stakes middle grade fantasy follows two unlikely allies as they confront a conspiracy that will shake the world of Impyrium to its core. For over three thousand years, the Faeregine dynasty has ruled Impyrium. But the family’s magic has been fading, and with it their power over the empire. Whether it’s treachery from a rival house, the demon Lirlanders, or rebel forces, many believe the Faeregines are ripe to fall. Hazel, the youngest member of the royal family, is happy to leave ruling to her sisters so that she can study her magic. But the empress has other plans for her granddaughter, dark and dangerous plans to exploit Hazel’s talents and reinforce the Faeregine mystique. Bob, a commoner from the remote provinces, has been sent to the city to serve the Faeregines—and to spy on them. One wants to protect the dynasty. The other wants to destroy it. But when Hazel and Bob form an improbable friendship, their bond may save the realm as they know it... or end it for good.

Oeuvres complètes de Ciceron

Théatre complet des Latins

Théâtre complet des latins, comprenant Plaute, Térence et Sénèque le tragique, avec la traduction en Français

Oeuvres complètes de Sénèque le philosophe

The contributions in this proceedings volume offer a new perspective on the mathematical ties between France and Italy, and reveal how mathematical developments in these two countries affected one another. The focus is above all on the Peninsula’s influence on French mathematicians, counterbalancing the historically predominant perception that French mathematics was a model for Italian mathematicians. In the process, the book details a subtle network of relations between the two countries, where mathematical exchanges fit into the changing and evolving framework of Italian political and academic structures. It reconsiders the issue of nationalities in all of its complexity, an aspect often neglected in research on the history of mathematics. The works in this volume are selected contributions from a conference held in Lille and Lens (France) in November 2013 on Images of Italian Mathematics in France from Risorgimento to Fascism. The authors include respected historians of mathematics, philosophers of science, historians, and specialists for Italy and intellectual relations, ensuring the book will be of great interest to their peers.

La figlia di Maria sulla tomba di S. Agnese

Recent years have witnessed an increased interest in classical studies in the ways meaning is generated through the medium of intratextuality, namely how different texts of the same or different authors communicate and interact with each other. Attention (although on a lesser scale) has also been paid to the manner in which meaning is produced through interaction between various parts of the same text or body of text within the overall production of a single author, namely intratextuality. Taking off from the seminal volume on Intratextuality: Greek and Roman Textual Relations, edited by A. Sharrock / H. Morales (Oxford 2000), which largely sets the theoretical framework for such internal associations within classical texts, this collective volume brings together twenty-seven contributions, written by an international team of experts, exploring the evolution of intratextuality from Late Republic to Late Antiquity across a wide range of authors, genres and historical periods. Of particular interest are also the combined instances of intra- and intertextual poetics as well as the way in which intratextuality in Latin literature drives on reading practices and critical methods already theorized and operative in Greek antiquity.

French Idioms and Proverbs

Consists of separately numbered series of publications of the Parlamento as a whole, the Senate, and the Camera dei deputati. Each session is divided into Disegni di leggi; Documenti; and: Discussioni.
